Abstract (en)

[origin: WO2018010839A1] The invention relates to a device body for a strength training device for carrying out a strength training exercise on a lever arm about a training shaft that has a training axis of rotation, comprising a resistance source for providing a training resistance, and a control unit for controlling said training resistance, the device body comprising two shaft receiving portions that are positioned at a distance from one another in a vertical direction and/or in a longitudinal direction of the device body, and being configured to connect the training shaft to the resistance source, at the two shaft receiving portions.
