Abstract (en)
[origin: WO2018008037A1] A structural element including a substantially flat central portion, a first web portion perpendicularly extending from an edge of the central portion, and a second web portion perpendicularly extending from an opposing edge of the central portion. The central portion and the first and second web portions are formed from a unitary steel sheet. The structural element is suitable for forming load bearing floors and/or walls in a structure.
