Abstract (en)
[origin: WO2018007238A1] The invention relates to a clamp (1), comprising a clamp band (2) extending in a peripheral direction (U) and a tensioning device (7) for tensioning the clamp band (2). According to the invention, in order to form the clamp (1) with yielding properties during tensioning in the simplest possible manner and in particular from a minimal number of structural components, according to the invention, the clamp band (2) has structures (11, 12) that extend at the edges (5, 6) of the clamp band.
