Abstract (en)

[origin: WO2018007438A2] Described is an operating module (10) intended for a motor vehicle and comprising an electric switch, in particular for changing drive mode in an automatic motor vehicle transmission. The switch comprises a first, manually actuatable lever (14), a second lever, and an electrical switching element (12). When actuated, the first lever (14) acts on the electrical switching element (12) by way of the second lever. The second lever is a leaf spring (16) with a fixedly clamped end (18) and a free end (20). When the first lever (14) is actuated, the leaf spring is deformed in such a way that it is at least partially shifted in the direction of the switching element (12).
