Abstract (en)

[origin: WO2018007212A1] The invention relates to a controllable phase control element, which comprises a drive unit (2) and a holder (3), to which at least two polarizers (4) are attached, which are arranged one behind the other in the direction of incidence of a wave. Each polarizer (4) is designed in such a way that the polarizer can convert a circularly polarized signal into a linearly polarized signal. The drive unit (2) is designed in such a way that the holder (3) and thus the polarizers can be rotated over a freely selectable angular range.
