Abstract (en)
[origin: EP3482803A1] Interface device (1) for a ski binding characterised in that it comprises a support base (2) and a support plate (3) having an upper surface (31) intended to be coupled with a ski boot (401, 402). Said support plate is pivoted on said support base and rotatably movable with respect to said support base. Said support plate moves in a first operating position (A) with respect to said support base, when said support plate is coupled with a first type of ski boot (401). Said support plate moves in a second operating position (B) with respect to said support base, when said support plate is coupled with a second type of ski boot (402).
