Abstract (en)
[origin: EP3483108A1] The elevator safety gear trigger (100) comprises an electromagnet (120), a longitudinal pull rod (140) having a first end (141) connected to a connection piece (130), which is drawn into connection with the electromagnet (120) when the electromagnet (120) is activated, and a second end (142) being operatively connected to at least one safety gear (70). An actuator (150) is arranged to detach the connection piece (130) and thereby also the pull rod (140) from the electromagnet (120) when the electromagnet (120) is deactivated.
