Abstract (en)

Auxiliary device for placing elements in the form of a plate which comprises a support element (1) which in turn comprises a substantially flat base (1.1) and a grip rod (1.2) extended from said base (1.1) perpendicularly thereto, where the base (1.1) is adapted to support at least two adjacent elements in the form of a plate (2) from opposed larger faces (1.21) of said grip rod (1.2); and a pressing element (3) adapted to be coupled to the grip rod (1.2) and to fasten the elements in the form of a plate (2) between the support element (1) and said pressing element (3), to achieve coplanarity between said elements in the form of a plate (2), and wherein smaller lateral faces (1.22) of the grip rod (1.2) comprise two rows of external nut threads (1.221) which result in segments of a nut thread developed helically about an axis of rotation (R) perpendicular to the base (1.1).
