Abstract (en)

[origin: EP3483378A1] A screening device (1) adapted for mounting on a frame structure (2) with frame members (4-7) comprising top and bottom members as well as side members and lining an opening in a building, in particular a door or a window, the screening device (1) comprising a top element (13), the top element comprising a roller tube (15) and two mutually opposite end sections (16, 17), at least one end section comprising an end piece (161, 171) adapted for connection to the frame structure, an inner piece (162, 172) adapted for being arranged inside the roller tube and being connected to the roller tube and/or to a motor (18) adapted for driving the screening device, and a rod element (163, 173) connecting the end piece and the inner piece, where at least one of the end piece and the inner piece of the at least one of the two mutually opposite end sections are connected to the rod element by means of a pin (1611, 1612, 1711, 1712) arranged extending through at least one opening (1631, 1632, 1731, 1732) in the rod element and attached to the at least one of the end piece and the inner piece.
