Abstract (en)

[origin: CN109763888A] The present invention relates to a cooling circuit (1) of the drive unit (2) of the vehicle (3), and the cooling circuit includes the high temperature circuit (4) connected for the pass of the first fluid through at least first cooling device (7) through the first supply port (5) and the first exhaust port (6) to the first cooling device (7), and the cold circuit (8) and the first cooling device (7) and the second cooling device (9) are connected and the second supply port (5) and the second exhaust port (6) are connected through the bypass valve (10) to the second cooling device (9) and it is input through the bypass valve (10) and the second fluid can be detoured from the second supply port (5) under the bypass of the second cooling device (9) towards the second exhaust port (6). The cold circuit (8) can be connected for the pass of the second fluid through the second cooling device (9) through the second supply port (5) and the second exhaust port (6) to the second cooling device (9).
