Abstract (en)
There is disclosed an oven (100) for heating food. The oven comprises a controller (156) and one or more heating elements (112, 114, 116, 118). One or more position sensors (138, 140) are provided that are constructed and arranged to obtain position information of a food item (134) to be heated in the oven by the one or more heating elements (112, 114, 116, 118). The controller (156) is configured to receive the position information from the one or more position sensors (138, 140), and to control a temperature output of the one or more heating elements (112, 114, 116, 118) based at least in part on the position information.
