Abstract (en)

[origin: WO2018011379A1] The invention relates to a drive device for a movable furniture part (3), in particular a drawer, which drive device comprises an ejection device (6), which has a slide (30), which is preloaded by a force accumulator (22) and which can be coupled to a movable furniture part (3) by means of a driver element (12), wherein, when the ejection device (6) is unlocked, the movable furniture part (3) is accelerated from an overpressing position or closed position over a first travel distance in an opening direction by means of the slide (30) and the driver element (12) and the movable furniture part (3) can be moved over a second travel distance after the first travel distance, at which second travel distance the driver element (12) can be moved relative to the slide (30), wherein braking forces act on the driver element (12) and the movable furniture part (3) during the second travel distance and the driver element (12) can be uncoupled from the movable furniture part (3) at the end of the second travel distance. The invention further relates to a method for opening a movable furniture part (3).
