Abstract (en)
[origin: WO2018010857A1] The invention relates to a stackable system container (1), comprising a bottom part (2) and a lid part (3) fastened to the bottom part (2), wherein respective coupling devices (8a) are movably fastened to two opposite side walls (7a, 7b) of the bottom part (2). In order to enable dimensionally stable and connected stacking of structurally identical system containers and also modular stacking of different system containers, each coupling device (8a, 8b) can be moved between an idle position, in which the coupling device (8a, 8b) is arranged below a top side (6) of the lid part (3), and a coupling position, in which the coupling device (8a; 8b) projects beyond the top side (6) of the lid part (3).
