Abstract (en)

[origin: WO2018011488A1] A manual device (10) comprising a first portion (12) and a second portion (14), the first portion (12) being at least partially sleeved with the second portion (14) and being movable in translation in an axial direction (X) relative to the second portion (14), the first portion (12) having a first distal end (12A) while the second portion (14) has a second distal end (14A) opposite the first distal end (12A) in the axial direction (X), and an immobilisation device (16) designed to prevent the first portion (12) from moving in translation in the axial direction (X) relative to the second portion (14) only when, considered in the direction of gravity (G), the first distal end (12A) is arranged above the second distal end (14A), the immobilisation device (16) comprising a chamber (16B) and a ball or equivalent (16A), housed in the chamber (16B).
