Abstract (en)
[origin: WO2018009952A1] The invention relates to a decanting device for decanting material from a flexible bulk material container, wherein the decanting device has a hollow body (2) that has an upper opening face and a lower opening face, wherein the upper end of the hollow body (2) projects into the interior of the flexible bulk material container so that material from the flexible bulk material container can enter the hollow body (2) via the upper opening face of the latter, wherein at the lower end of the hollow body (2) there is a closure that has an upper plate (4) and a lower plate (5), wherein the lower plate (5) can be pivoted about the axis of a bolt (8), from a first position in which it completely closes the opening of the upper plate (4) to a second position in which the opening of the upper plate (4) is at least slightly open, wherein the lower plate (5) has a structure (12) that forms at least part of the standing face of the decanting device, wherein the bolt (8) does not extend downward past the standing face.
