Abstract (en)

[origin: WO2018010977A1] The current invention discloses a container for the transport of piece goods, whereby said containeris selectably configurable between a folded configuration and an expanded operational configuration. Said container is comprised of a container body which has two pairs of side panels defining an internal compartment, a bottom and an open topsurface. Said open top surface is closable by a lid attached to a side panel of said container and enclosing at least partially edges of those side panels not connected to said lid, characterized in that said lid is attached to said side panel by a hingeportion, whereby the containerbodyin said folded configuration is rotatable alonga longitudinal axis along said hinge portion to allow at least partial stowage in said lid.
