Abstract (en)
[origin: WO2018011711A1] A machine for producing ice, usable in commercial stores such as bars and ice-cream parlours, comprising a frame (11) with which are associated a mould (20) having a plurality of shapers (15) for forming blocks of ice and a spraying device (13) for spraying water towards the mould (20), the mould (20) being associated with a cooling/heating device configured for cooling the water in the shapers (15) until the ice is formed and then heating the ice formed so that it can be free to come out from the shapers (15), the mould (20) being configured so that the ice can come out from the shapers (15) falling by gravity, the machine (10) being characterised in that each of the shapers (15) is connected to one shaper (15) adjacent thereto through one connection channel (17) open on the same side where the openings of the shapers (15) face.
