Abstract (en)  
[origin: WO2018015170A1] A connecting element (1) serves to establish electrical contact between two busbars. The connecting element (1) comprises a housing (2) with an interior (20) and a contact element (3) which is mounted in the interior (20). The contact element (3) comprises at least one resilient contact web (32) and defines a substantially flat plane (39). The contact element (3) divides the interior (20) along the plane (39) into at least a first receiving space (21) for receiving a first busbar (4) and a second receiving space (22) for receiving a second busbar (5), wherein the contact element (3) establishes electrical contact between the first busbar (4) and the second busbar (5) by way of the at least one contact web (32).
