Abstract (en)

[origin: CN209582136U] The utility model provides equipment for gluing a label. The flow rate measurement during the glue supply comprises the following steps: supplying glue, in particular cold glue, to the glue application unit via a supply line; and determining a volumetric flow rate of the glue through the supply line; wherein, depending on the determined volume flow, the supply of the glue is adjusted by means of an adjustable supply device in such a way that the glue having a constant flow rate is discharged by the glue application unit.
