Abstract (en)
[origin: WO2016102013A1] The invention relates to a laundry washing machine (1) comprising an automatic dosing device (70) having at least one container (71) suitable for receiving an amount of wash product (D) sufficient for a plurality of washing cycles and having a recirculation circuit (20) for transferring liquid from a first region (3a) of the washing tub (3) and for re-admitting the liquid into a second region (3b) of the washing tub (3). The automatic dosing device comprises a dispensing line (72) terminating at said recirculation circuit (20) which allows to convey the wash product (D) from the at least one container (71) to the washing tub (3).
