Abstract (en)
[origin: EP3486415A1] A reinforcing device for hinges (4) of panels (8) of window shutters, blinds or the like, adapted to be mounted at the pivots (6) to which a panel-stop device (5) is applied. Said device comprises a fixing part (2) on the panel and a part (3) adapted to be inserted between the hinge and the panel-stop device so as to oppose the force of gusts of wind and/or other external factors which, by pushing on the panel blocked in open configuration by the panel-stop, would tend to close it thus deforming the hinge.
