Abstract (en)
[origin: WO2018015542A1] A pushing-out device for a movable furniture part (1), in particular a drawer, comprises a first pushing-out unit (7) with a first ejector element (10) which is prestressed by a first energy store (30), can be locked when the first energy store (30) is in a stressed position and, when unlocked, ejects the movable furniture part (1) in the opening direction, and also comprises a second pushing-out unit (7') with a second ejector element (10) which is prestressed by a second energy store (30), can be locked when the second energy store (30) is in its stressed position and, when unlocked, ejects the movable furniture part (1) in the opening direction, wherein the first pushing-out unit (7) is synchronized with the second pushing-out unit (7') in respect of the unlocking action via a coupling means, characterized in that the coupling means comprises at least one pivotably mounted pendulum (14). Optimum utilization of the installation space adjacent to a movable furniture part is thus possible.
