Abstract (en)
[origin: WO2018015691A1] The invention relates to a headrest for a motor vehicle seat, said headrest comprising: two parallel rods for connection to the seat; a casing intended to receive a headrest cushion; two sets of bearings (4), each comprising an upper bearing and a lower bearing, each of said sets being mounted with engagement of said bearings in receptacles that are provided for them in said casing, said bearings being provided with an orifice (6) in which the corresponding rod is received in a sliding manner; in which, for each of said bearings, the periphery of an orifice (6) is delimited by two fixed zones (9) of said bearing, said zones being arranged opposite each other in the longitudinal direction and being substantially in contact with the corresponding rod, and by two inner flexible tabs (10) that are arranged opposite each other in the transverse direction, said tabs being formed integrally with said bearing and being returned elastically toward said rod in such a way as to firmly enclose the latter.
