Abstract (en)  
[origin: WO2018015624A1] The invention relates to a fluid supply device comprising a pressure fluid valve, with or without a built-in pressure-reducing valve, said device including: a body (2); and a fluid circuit (3, 13) housed at least partially inside the body (2), said circuit (3, 13) having an upstream end (4) to be connected to a pressure fluid store (140) and a downstream end (5, 150) to be connected to a receptacle, said circuit (3, 13) comprising at least one control member (6, 60) for controlling the flow rate in the circuit (3, 13) and a member (7) for actuating said control member. The least one control member (6, 60) comprises an adjustable flow rate regulator (16) controlled by an electronic data-acquisition and -processing element (12) built into the valve (1) and comprising a wire connection or an antenna (112) configured to receive a control signal remotely from the flow rate regulator (16) so as to remotely control and alter the flow rate applied by the regulator.
