Abstract (en)
An active massage assisting apparatus includes two massage assemblies (10) and a pivotal connection assembly (20). Each of the massage assemblies (10) includes a massage member (11) and a handle portion (12) connected to the massage member (11). The handle portion (12) is held by the user. The pivotal connection assembly (20) is disposed between the two massage assemblies (10) and provided with at least a pivoting junction (21). The handle portions (12) drive the massage members (11), with the pivoting junction (21) as the center point, to carry out massage motions including rubbing, kneading, pushing, pressing, and pounding. Therefore, the user is able to massage various body portions that are uneasily reached, such as the back, rear neck, shoulders, and bottom portions according to personal demands, so as to effectively eliminate body fatigue.
