Abstract (en)
In accordance with one aspect of the present disclosure, a greeting card is disclosed that includes a plurality of panels connected such that the greeting card is reconfigurable between a closed configuration and an open configuration, at least one object positioned between the plurality of panels that is reconfigurable between a collapsed configuration and an expanded configuration, and an attachment member connecting the at least one object to the plurality of panels such that the at least one object can be detached from the plurality of panels. In various embodiments, the greeting card may further include a locking member that is configured and dimensioned to maintain the expanded configuration of the at least one object. The attachment member can be an adhesive, a tether, a magnet, perforations. The attachment can be reversible or irreversible. The object can be displayed.
