Abstract (en)  
[origin: US2019163138A1] The present invention relates to a dial intended to be mounted in a watch case, the dial including a first support plate and a second fragile plate, the two plates defining a horizontal plane and being bonded one on top of the other in a vertical direction relative to the horizontal plane, characterized in that the second plate has a smaller section in the horizontal plane than the section of the first plate in order to leave free on the first plate a peripheral rim intended to be mounted with play inside the watch case. It also relates to a watch including the dial.
