Abstract (en)

[origin: US2019164347A1] A method of displaying in mixed reality at least one virtual object. The method includes comprising the following steps that are performed by a first terminal: sending at least one position data element of a pointer positioned on a portion of a first window of a computer application, said first window being displayed by a second terminal; receiving at least one data element relating to the portion of the first window; and processing the at least one data element relating to the portion of the first window, so as to display the at least one virtual object in mixed reality on the basis of the at least one data element relating to the portion of the first window.
