Abstract (en)

[origin: EP3490201A1] This application provides an information synchronization method. The method includes: sending, by a controller, a first message to a network device, where the first message carries CRP routing entry information, and is used to advertise a CRP route, and the first message includes first identification information; and after receiving the first message, storing, by a forwarding device, the CRP routing entry information into a CRP routing table of the network device as indicated by the first identification information. In the technical solutions of this application, because a route advertised by the controller and a route advertised by using a routing protocol between forwarding devices are stored in different routing tables, a related application of the route advertised by using the routing protocol between the forwarding devices is not affected.
