Abstract (en)

User equipment of a wireless communication system has subscriptions to network services. The user equipment (100) receives wirelessly and detects an indication of a prioritized transmission of a network service requiring a prioritized subscription, the user equipment (100) having the prioritized subscription allowing an access to the network service of the prioritized transmission. The user equipment (100) disables, on the basis of the detection of the indication, every subscribed network service except the network service requiring the prioritized subscription, and allows the network service requiring the prioritized subscription.
