Abstract (en)
[origin: WO2018019913A1] Receiving and pick-up device for postal items (2), in particular large-volume mailpieces such as packages, parcels or the like, having a housing (7) comprising a receiving space (8) and comprising a base part (9) and an extension part (11), mounted for adjustment relative to the base part (9) along an adjustment axis (X), and having an adjustment device (29), which to adapt the volume of the receiving space (8) is designed in such a way that the extension part (11) can be moved along the adjustment axis (X) between a first position, in which the receiving space (8) has a first volume, and a second position, in which the receiving space (8) has a second volume which is increased relative to the first volume, wherein a closable exterior opening (16) is formed on a first front side (15) of the base part (9) and a closable interior opening (18) is formed on a second front side (17) of the extension part (11) which is opposite to the first end face (15) in the direction of the adjustment axis (X).
