Abstract (en)

[origin: WO2018020359A1] The present invention relates to a device for preparing and delivering at least a first dose of medicament intended for oral administration to a first patient A and containing at least a first mixture which contains a first pharmaceutically active compound. According to the invention, it characteristically comprises: - storage means (40, 31; 33) having at least a first reservoir (31) which is movable and leaktight and contains said first mixture; - distribution means (31, 316, 318, 319, 317, 420) for distributing at least said first mixture; - recording means for recording data for the recording of at least one reference value of said first mixture for said first patient (VA1); - processing means (34) for the processing of the data and control of said distribution means (31, 316, 318, 319, 317, 420), which are coupled to said distribution means (31, 316, 318, 319, 317, 420) and to said recording means in order to produce said first dose of medicament which contains a quantity of said first mixture equal to said reference value of said first mixture for said first patient A; and - parameterization means (1) which are at least partially offset from said storage means (40, 31, 33), said processing means (34), said recording means and said distribution means and which are equipped with transmission means capable of cooperating with said recording means in order to modify said reference value of said first mixture for said first patient (VA1) recorded in the recording means.
