Abstract (en)
[origin: WO2018019933A1] The invention relates to a valve device (24) for ventilating and/or venting a tank for a motor vehicle, having at least one ventilation opening (12), via which the tank is to be ventilated and/or vented, wherein the ventilation opening (12) is provided with a valve seat (14) and with a valve ball (20), wherein the valve ball (20) is movable between a closed position in which it blocks the ventilation opening (12), wherein the valve ball (20) is seated on the valve seat (14), and at least one open position, which at least partially opens the ventilation opening (12), as a result of movements of the valve device (24), wherein the valve seat (14) is arranged in a plane which runs obliquely with respect to the vertical (26) in the installation position of the valve device (24).
