Abstract (en)
[origin: WO2018021956A1] The invention relates to a loose-fill material compressing device (100) for compressing thermal insulation loose-fill material into blocks of insulation material comprising: a support surface (110) for the compressed blocks (200) of insulation, a compression device (120) with a compression surface (120a), and a feeding device (130) for feeding loose-fill material. By adapting the compression device for reciprocal movement between a first position, wherein the feeding device (130) is allowed to feed loose-fill material to a position on the support surface (110), and a second position, and to compress the loose-fill material (200) to a density of at least 160 kg/m³, a device for creating highly compressed block of loose-fill cellulose thermal insulation material that are suitable for use with the known shredding devices is provided. A corresponding method is also disclosed.
