Abstract (en)

[origin: WO2018020138A1] The invention relates to a collector plate (11) for heat exchanger (1), the collector plate (11) comprising: – a peripheral groove (21) exhibiting a bottom (22), – at least one upper step (25) protruding with respect to the bottom (22) of the said groove (21) over a predefined height (H1), and – at least at one longitudinal end of the collector plate (11) an intermediate portion (27) between the upper step (25) and the said groove (21). According to the invention, at the said at least one longitudinal end of the collector plate (11), the said groove (21) exhibits an interior wall (23) at least one portion of which connects the intermediate portion (27) to the bottom (22) of the said groove (21) and extends over a height (H2) that is non-zero and less than the height (H1) of the upper step (25). The invention also relates to a corresponding header box (3) and to a corresponding heat exchanger (1).
