Abstract (en)
[origin: WO2018050386A1] In order to create a device (1) for retaining a cable guide (12) of a high-voltage transformer, which comprises a support structure (2) that can be secured to the high-voltage transformer, a cable guide receiver (9) arranged on the support structure (2) and configured for retaining the cable guide (12), and a securing unit for securing the cable guide to the cable guide receiver, and which has a high mechanical loading capacity and is simultaneously cost-effective, according to the invention, the securing unit has at least one clamping means (13) that clamps the cable guide (12) to the cable guide receiver (9) in a clamping position, and a clamp securing means (14, 18) is provided for securing the clamping means (13) in the clamping position thereof.
