Abstract (en)
[origin: WO2018024977A1] The invention relates to a method for controlling a multi-level modular converter (10), the method comprising an internal adjustment that can be modelled by a continuous time model which can be represented in the form of an equation system, the internal adjustment being implemented based on a discrete time model, and the discrete time model being obtained via a step of transforming the equation system to represent it in matrix form, and a step of discretizing the equation system represented in said matrix form.
