Abstract (en)  
Provided is an information provision method of raw coffee beans using a database that holds information on a plurality of kinds of raw coffee beans, and the database includes at least identification information of each raw coffee bean, control information indicating a roasting method of each raw coffee bean by a roasting machine, and attribute information associating accompanying information related to production of each raw coffee bean with each other. The information provision method causes user terminal (200) to read an information code into which one of identification information of a given raw coffee bean and address information of database server (100) storing attribute information of the given raw coffee bean is converted, and to extract the identification information or address information. In addition, when terminal (200) transmits a request of attribute information of a given raw coffee bean based on the identification information or address information, the attribute information of the given raw coffee bean is extracted from database server (100) and transmitted to terminal (200). Further, terminal (200) transmits control information included in the attribute information to roasting machine (300) and causes an output device to output accompanying information.
