Abstract (en)

[origin: EP3492334A1] The invention relates to a device adapted to at least partially cover a coupler-head of a multi-car vehicle, wherein the device comprises a front window and a front face cover, wherein a top cover section and side cover sections are connected to the front window, and the front face cover is adapted to be (a) selectively attached to or detached from the front window and/or the cover sections and/or (b) rotatable such that the front face cover can be swung towards a side cover section.
