Abstract (en)
The disclosure relates to a method including:- monitoring of events captured by sensors of a communication system, said monitoring being performed during a monitoring time interval taking account of a reference time of day when a first electronic device of the communication system is in a reference location;- generating an alert according to a similarity between a reference pattern of events and the monitored events, the alert being generated at a time different from the reference time of day.The disclosure also relates to corresponding electronic device, communication system, computer readable program product and computer readable storage medium.
