Abstract (en)  
[origin: WO2018024447A1] The invention relates to a connector for connecting a support and a frame to be arranged perpendicular thereto, the connector having at least one pin or hook with an undercut designed to engage a keyhole-shaped through-opening in the frame or support, wherein the dimensions of a front end portion of the pin or hook are adapted to a wider portion of the through-opening and the dimensions of the undercut are adapted to a narrower portion of the through-opening. A housing of the connector can be secured to the front end of the support or frame and the at least one pin or hook is arranged such that it can be pushed into the housing of the connector in parallel to a longitudinal direction of the support or frame.
