Abstract (en)
[origin: WO2018024311A1] The present invention relates to an order-picking system for order-related order-picking of goods stored in racks, with an automated order-picking cell which has a gripper for gripping and order-picking the goods and a cell controller for activating the gripper, with a transport system by means of which the racks can be conveyed to at least one order-picking position in the region of the order-picking cell, wherein the racks have shelves and/or containers, on and/or in which goods are stored, wherein at least one shelf and/or container of a rack arranged in the order-picking position can be conveyed from a storage position inside the rack into a removal position in which said shelf and/or container is at least partially arranged in front of the rack, wherein the gripper is activated by the cell controller in such a manner that said gripper grips the goods stored on the shelf and/or in the container while the shelf and/or container is at least partially arranged in front of the rack in the removal position.
