Abstract (en)

[origin: WO2018024405A1] The invention relates to a door handle (10) for a vehicle door (100) of a motor vehicle, which door handle has a movable emergency opening element (11), which can be brought into a mechanical operative connection with a locking system (101) of the vehicle door (100), wherein the emergency opening element (11) has a traction means (12) for actuating the locking system (101), in particular for unlocking and/or for opening the vehicle door (100). The emergency opening element (11) is movable between at least two positions (I, II), namely a rest position (I), in which the emergency opening element (11) is fastened to the door handle (10), and an operating position (II), in which the emergency opening element (11) can be actuated by a user in order to actuate the locking system (101) by pulling on the traction means (12), and further comprising a triggering device (14) for the emergency opening element (11) in order to automatically transfer the emergency opening element (11) from the rest position (I) into the operating position (II), in particular in an emergency situation, wherein the emergency opening element (11) is arranged on an underside of the door handle (10).
