Abstract (en)

[origin: WO2018024765A1] The invention relates to a heat exchanger module with longitudinal axis (X) comprising a stack of plates (1, 2) defining at least two fluid circuits, at least a portion of the plates each comprising fluid circulation channels each delimited, at least in part, by a groove. According to the invention, a communication is produced between the channels within a same plate and between all the plates of a same circuit, in a feed or pre-collector zone, with a succession of channel groupings, two-by-two, in the form of bifurcations.
