Abstract (en)

[origin: WO2018024880A1] The invention relates to a weapon tray (10), wherein the weapon tray (10) has at least one first clamping band, wherein the at least one first clamping band has at least one contact region (20) and at least one first securing region (30), wherein the contact region (20) and the first securing region (30) are connected via a first force-limiting region (40), wherein the first securing region (30) is connected to the weapon tray (10) such that same can move transverse to the longitudinal direction of the weapon tray, wherein the at least one first securing region (30) and the first force-limiting region (40) can be securely connected to one another, wherein the first force-limiting region (40) has at least one first shaft (80), wherein the at least one first shaft (80) is rigidly connected to the first force-limiting region (40), wherein the at least one first shaft (80) is arranged transverse to the longitudinal direction of the weapon tray, wherein at least one first restoring element (90) is arranged about the at least one first shaft (80), wherein a first connecting element (100) is moveably arranged on the at least one first shaft (80), and wherein the first connecting element (100) is securely connected to the contact region (20).
