Abstract (en)

[origin: WO2018024543A1] The invention relates to an interferometer (200) having a first reflector element (202) and a second reflector element (206) spaced apart from the first reflector element (202) by an adjustable resonator gap (204), wherein the interferometer (200) has a first driving device (100) and a second driving device (102), wherein the first driving device (100) is designed to adjust a gap height (104) of the resonator gap (204), wherein the first driving device (100) has a first adjustment range (208), wherein the second driving device (102) is also designed to adjust the gap height (104), wherein the second driving device (102) has a second adjustment range (210) which supplements the first adjustment range (208).
