Abstract (en)
[origin: WO2018025843A1] An information processing system includes an electronic apparatus having firmware installed therein, and a client terminal configured to be communicably coupled to the electronic apparatus or to a server configured to provide the firmware through switching between the electronic apparatus and a network to a coupling destination. The client terminal includes a firmware acquisition control unit configured to acquire firmware from the server apparatus to store the acquired firmware in a firmware storage in response to the client terminal being communicably coupled to the server apparatus, and a firmware update control unit configured to update the firmware installed in the electronic apparatus to the firmware stored in the firmware storage in response to the client terminal being communicably coupled to the electronic apparatus.
