Abstract (en)  
[origin: WO2018027057A1] A system and method for completing an electronic document. The method includes analyzing the electronic document to determine at least one transaction parameter, wherein the electronic document includes at least partially unstructured data; creating a template for the electronic document, wherein the template is a structured dataset including at least one data element, wherein each transaction parameter is a value of one of the at least one data element; retrieving, based on the template, complementary data for one of the at least one data element when the data element is incomplete; generating, based on the complementary data and the incomplete first data element, a complete second data element; and associating the complete second data element with the electronic document.
