Abstract (en)

[origin: WO2018024918A1] The invention relates to a system for guiding an exceptional convoy comprising a transport vehicle and a pilot vehicle, which follow a planned route from a departure point to a delivery point, and a remote logistics monitoring centre, the route being organised as a sequence of critical points, by supplying each participant of the convoy with a paperless roadbook that is updated in real time, comprising prioritised information intended for the various participants. The invention also concerns a method for implementing this system, allowing the dynamic planning of a predetermined route for each of the participants of the convoy.
