Abstract (en)

[origin: WO2018024531A1] Control module for modular electrical switching device and obtained modular electrical switching device. The invention relates to a modular electrical switching device (1A) obtained by juxtaposing a control module (10) and a switching module (20), each including a rotary mechanism that rotates about an axis of rotation (A), which are coupled to one another by complimentary coupling end pieces (11, 12; 21, 22). The control module (10) is designed to be capable of being controlled by a control rod (3) both via frontal control through a frontal entry opening (30) provided in the face of the control module (10), and via right or left lateral control through two lateral entry openings (34, 35) provided in the sides of the control module (10), observing one and the same direction of movement. The coupling end pieces (11, 12) of the control module (10) are provided on separate male (110) and female (120) coupling parts that are attached between the modules (10, 20) when they are juxtaposed in order to form said switching device (1A).
